EDUCATION

University of California San Diego
Bachelor of Science in Computer Science

Sept. 2021 – June 2024
GPA: 3.98

University of California San Diego
Master of Science in Computer Science

Sept. 2024 – June 2025

Courses: AI/Machine Learning, Deep Learning, Recommender Systems, Operating Systems, Computer Security, Systems Programming, Data Structures, Algorithms, Digital Systems, Computer Architecture, Computer Graphics, Parallel Computing

TECHNICAL SKILLS

Languages: Java, C, C++, C#, CUDA, Go, Python, x86/ARM Assembly, SQL, HTML, CSS, JavaScript/TypeScript, GLSL

Libraries/Frameworks: React, Node.js, ASP.NET, NumPy, PyTorch, OpenCV, scikit-learn, OpenGL

Developer Tools: Git, Perforce, Jira, Confluence, GitHub Actions, Jenkins, Docker, Vim, Postman, Miro

EXPERIENCE

Amazon, Software Development Engineer Intern

Sept 2024 – Dec. 2024

Niantic, Computer Vision Engineer Intern

June 2024 – Sept. 2024

Viasat, Software Engineer Intern

June 2023 – Sept. 2023

- Overhauled satellite modem UI with **TypeScript React** to automate key swaps and reduce human intervention by **95%**.
- Enhanced modem/network security by updating interfaces and **Docker** containers to utilize new SSL certificates from key swap tool.
- Resolved race conditions for **real-time embedded systems** in C, preventing over **\$5000** in potential aircraft antenna unit damages by redesigning state machines and restricting IPC messages based on log analysis.
- Introduced **Jest** as the new standard unit-testing framework and automated **50+** unit and end-to-end tests, increasing test-coverage from **0%** to **90%** by simulating user flow and backend responses.
- Seamlessly integrated multiple testing frameworks from **Go** and **JavaScript** into a single **CI/CD** pipeline via **Jenkins**.

UC San Diego CSE Department, Undergraduate Researcher/Developer

February 2023 – June 2024

- Fine-tuned **computer vision machine learning** (ML) models such as Single-Shot-Detectors and YOLOv8 via **transfer learning** for localizing avocado nodes to identify effects of climate change on agriculture.
- Mentored** younger members of AI lab by teaching ML models/concepts and delivering intuitive presentations of ML research papers.
- Addressed product-breaking bugs in state machine visualization and simulation tools used by **1000+** students per year.

UC San Diego CSE Department, Undergraduate Tutor

September 2022 – June 2024

- Guided **1000+** students in mastering Python, C, and ARM Assembly programming, and tools such as Git, and Bash.
- Instructed **advanced algorithms, operating systems**, classical artificial intelligence, machine learning theory and implementation with optimization mathematics, scikit-learn, and **PyTorch**.
- Identified and patched security vulnerabilities** for programming assignment autograders on Gradescope, completely eliminating most student autograder exploits.
- Hosted office hours to assist students with programming assignments/conceptual problems and achieved **100%** student approval ratings across multiple courses.

PROJECTS

Game Recommender | Pandas, NumPy, Scikit-Learn

- Designed a collaborative-filtering based **recommender system** to predict which games Steam users are likely to play.
- Optimized models by **hyperparameter tuning** with grid search, cross-validation, and ensembling predictions.
- Utilized feature engineering with **text-mining** techniques such as topic modeling to mitigate cold-start problem.
- Ranked among the **top 0.3%** participants in machine learning competition in both regression and classification tasks.

Notebook Picker | React, HTML, CSS, JavaScript, ASP.NET, C#, Oracle Cloud

- Led team of 5 students to develop a full-stack web application for filtering laptops by specifications/price to assist with shopping.
- Planned and built a **REST API** for finding and filtering laptops based on CPU/GPU model, brands, release, etc. by querying from **Oracle Cloud** database with an ASP.NET backend.
- Reduced API response times by over **90%** by caching SQL queries with Entity Framework Core object relational mapping.
- Designed wireframe layout in **Miro** and implemented routing and user interface with React.
