# **BEN XIA**

(858)-357-1594 | benjx32@gmail.com | bbxia@ucsd.edu | linkedin.com/in/benjxia | github.com/benjxia

## **EDUCATION**

## **University of California San Diego**

Bachelor of Science in Computer Science

GPA: 3.98/4.00

Sept. 2021 - June 2024

## **University of California San Diego**

Master of Science in Computer Science

Sept. 2024 – June 2025

GPA: 4.00/4.00

**Courses**: AI/Machine Learning, Deep Learning, Recommender Systems, Natural Language Processing, Operating Systems, Computer Security, Systems Programming, Data Structures, Algorithms, Digital Systems, Computer Architecture, Computer Graphics, Parallel Computing

### **TECHNICAL SKILLS**

 $\textbf{Languages}{:} \ Java, C, C++, C\#, CUDA, Go, Python, x86/ARM \ Assembly, SQL, HTML, CSS, JavaScript/TypeScript, GLSL \ Assembly, SQL, HTML, CSS, Assembly,$ 

Libraries/Frameworks: React, Node.js, ASP.NET, NumPy, PyTorch, OpenCV, scikit-learn, OpenGL, Message Passing Interface (MPI)

Developer Tools: Git, Perforce, Jira, Confluence, GitHub Actions, Jenkins, Docker, Vim, Postman, Miro

#### EXPERIENCE

**Amazon**, Software Development Engineer Intern

Sept 2024 - Dec. 2024

Niantic, Computer Vision Engineer Intern

June 2024 - Sept. 2024

Viasat, Software Engineer Intern

June 2023 - Sept. 2023

- Overhauled satellite modem UI with TypeScript React to automate key swaps and reduce human intervention by 95%.
- Enhanced modem/network security by updating interfaces and **Docker** containers to utilize new SSL certificates from key swap tool.
- Resolved race conditions for **real-time embedded systems** in C, preventing over **\$5000** in potential aircraft antenna unit damages by redesigning state machines and restricting IPC messages based on log analysis.
- Introduced Jest as the new standard unit-testing framework and automated 50+ unit and end-to-end tests, increasing test-coverage from 0% to 90% by simulating user flow and backend responses.
- Seamlessly integrated multiple testing frameworks from Go and JavaScript into a single CI/CD pipeline via Jenkins.

#### **UC San Diego CSE Department**, Undergraduate Researcher/Developer

Feb. 2023 – June 2024

- Fine-tuned **computer vision machine learning** (ML) models such as Single-Shot-Detectors and YOLOv8 via **transfer learning** for localizing avacado nodes to identify effects of climate change on agriculture.
- **Mentored** younger members of AI lab by teaching ML models/concepts and delivering intuitive presentations of ML research papers.
- Addressed product-breaking bugs in state machine visualization and simulation tools used by 1000+ students per year.

## **UC San Diego CSE Department**, Undergraduate Tutor

Sept. 2022 – June 2024

- Guided **1500+** students in mastering Python, C, and ARM Assembly programming, and tools such as Git, and Bash.
- Instructed **advanced algorithms**, **operating systems**, classical artificial intelligence, **machine learning** theory and implementation with optimization mathematics, scikit-learn, and **PyTorch**.
- Identified and patched security vulnerabilities for programming assignment autograders on Gradescope, completely eliminating most student autograder exploits.
- Hosted office hours to assist students with programming assignments/conceptual problems and achieved **100%** student approval ratings across multiple courses.

## **PROJECTS**

#### **Game Recommender** | Pandas, NumPy, Scikit-Learn

- Designed a collborative-filtering based recommender system to predict which games Steam users are likely to play.
- Optimized models by hyperparameter tuning with grid search, cross-validation, and ensembling predictions.
- Utilized feature engineering with **text-mining** techniques such as topic modeling to mitigate cold-start problem.
- Ranked among the top 0.3% participants in machine learning competition in both regression and classification tasks.

# Notebook Picker | React, HTML, CSS, JavaScript, ASP.NET, C#, Oracle Cloud

- Led team of 5 students to develop a full-stack web application for filtering laptops by specifications/price to assist with shopping.
- Planned and built a REST API for finding and filtering laptops based on CPU/GPU model, brands, release, etc. by querying from Oracle Cloud database with an ASP.NET backend.
- Reduced API response times by over 90% by caching SQL queries with Entity Framework Core object relational mapping.
- Designed wireframe layout in **Miro** and implemented routing and user interface with React.
